Threat Hunter IR
Incident Response

The Hard Truth About Mobile Threats

Even in the most secure and regulated organizations, highly motivated attackers are targeting your users. Executives, system administrators, and employees with access to sensitive data are prime targets for sophisticated mobile cyberattacks.

Zero-click exploits are incredibly difficult to detect and even harder to analyze forensically. The reality is, most organizations lack the specialized mobile threat hunting expertise required to effectively mitigate these risks. This isn't just time-consuming; it's costly and leaves your organization vulnerable.

Mobile Threat Hunting, On Your Terms

iVerify Threat Hunter IR is the strategic advantage you need to scale mobile forensics and confront advanced malicious threats head-on with enterprise ready mobile security tools that streamline and accelerate the collection and analysis of forensic data.

Dive deep on demand for behavioral threat hunting that surfaces hidden risks, accelerates investigations, and keeps you ahead of mobile threats. A truly scalable, end-to-end forensic process from flagging suspicious artifacts to immediate alerts about unknown malware.

The solution delivers:
Comprehensive Threat Analysis: Analyzes heuristic threat data, diagnostic logs, process metadata, and malicious adversarial signatures.

Continuous Monitoring & On-Demand: Delivers essential security hygiene of file-based IOCs, verification of enabled and trusted biometrics, screen lock status, and OS and app versions status

Flexible Deployment: Deploy remotely or on-premises.

Advanced Mobile Fleet Protection: Protects your mobile fleet from advanced zero-day vulnerabilities, spyware, and other sophisticated threats.

Key Benefits

See everything, miss nothing
- Correlate heuristics, diagnostic logs, process metadata, and known TTPs to uncover advanced mobile threats with precision
- Instantly leverage adversarial signatures and forensic metadata
- Spot anomalies across apps, OS processes, and device activity at scale

Stop threats before they start
- Defend against sophisticated exploits, zero-click spyware, and advanced mobile threats—at scale and in real time
- Detect unpatched or unknown vulnerabilities and respond to avoid exploitation

Deployment flexibility to fit your reality, not ours
- Your choice: Cloud, hybrid, or fully on-prem deployments
- Seamlessly Integrate with your existing
